-1- SUBUNIT: HOMODIMER (PROBABLE).
-1- ALTERNATIVE PRODUCTS: AT LEAST TWO FORMS MAY BE PRODUCED BY
ALTERNATIVE SPLICING OF THE SAME GENE.
-1- TISSUE SPECIFICITY: FOUND IN THE HARD KERATINIZING TISSUES SUCH AS
THE INNER ROOT SHEATH (IRS) OF HAIR FOLLICLES AND MEDULLA, AND IN
THE EPITHELIA OF THE TONGUE, HOOF AND ROMEN.
-1- DOWAIN: CONSISTS OF NINE DOMAINS. DOMAIN I CONTAINS TWO EF HAND
CALCIUM-BINDING DOMAINS. DOMAINS 2-4. 6, AND 8 ARE ALMOST
ENTIRELY ALPHA-HELICAL, CONFIGURED AS A SERIES OF PEPTIDE REPEATS
OF VARTING REGULARITY, AND ARE THOUGHT TO FORM A SINGLE-STRANDED
CALCHOR REGULARITY, AND ARE THOUGHT TO FORM A SINGLE-STRANDED
CALCHOR REGULARITY, AND ARE THOUGHT TO FORM A SINGLE-STRANDED
CALCHOR REGULARITY, AND ARE THOUGHT TO FORM A SINGLE-STRANDED
CONTAINS SAND 7 ARE LESS WELL ORGANIZED AND MAY INDUCE FOLDS IN
CHEMOST REGULAR AND MAY BIND KIP DIRECTLY BY INDUCE FOLDS IN
CHEMOLECULE. DOMAIN 9 CONTAINS THE C-TERMINUS, CONSERVED AMONG

-1- FUNCTION: MUSCLE CONTRACTION.

-1- FUNCTION: MYOSIN IS A PROTEIN THAT BINDS TO F-ACTIN & HAS ATPASE
ACTIVITY THAT IS ACTIVATED BY F-ACTIN.

-1- SUBDUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2
HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC)

-1- SUBCELLULAR LOCATION: Thick filaments of the myolibrils.

-1- SIMILARITY: CONTAINS 1 MYOSIN-LIKE GLOBULAR HEAD DOMAIN.

-1- SIMILARITY: CONTAINS 1 IQ DOMAIN.
Aequipecten irradians (Bay scallop).

SUBBNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2 HEAVY CHAIN SUBGNITS (MIC), 2 ALKALI LIGHT CHAIN SUBGNITS (MLC) AND 2 REGULATORY LIGHT CHAIN SUBDNITS (MLC-2), SUBCELLULAR DOCATION: Thick filaments of the myofibrils. DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE-97176447; PubMed-9023993;

TeDNA cloning of myosin heavy chain isoforms from carp fast skeletal
muscle and their gene expression associated with temperature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PTM: TWO CYSTEINE RESIDUES IN THE SI DOMAIN ARE SELECTIVELY ALKYLATED AND ARE REQUIRED FOR MYOSIN ATPASE ACTIVITY. MISCELLANEOUS: EACH MYOSIN HEAVY CHAIN CAN BE SPLIT INTO 1 LIGHT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
